

8: Lab - Generalized Linear Models

Environmental Data Analytics | John Fay and Luana Lima | Developed by Kateri Salk

Spring 2026

Objectives

1. Answer questions on M5/A5
 2. Answer questions on M6 - GLMs
 3. Practice more application GLM to real datasets
-

Set up

```
library(tidyverse)
library(agricolae)
library(here)
here()

## [1] "/home/guest/EDE_Spring2026_personal"

#Read in the processed EPA air quality dataset
EPAair <- read.csv(
  here("Data/Processed_KEY/EPAair_O3_PM25_NC1819_Processed.csv"),
  stringsAsFactors = TRUE) %>%
  mutate(Date = ymd(Date))

#Read in the processed NEON Litter dataset
Litter <- read.csv(
  here("Data/Processed_KEY/NEON_NIWO_Litter_mass_trap_Processed.csv"),
  stringsAsFactors = TRUE) %>%
  mutate(collectDate = ymd(collectDate))

# Create and set the plot theme
mytheme <- theme_classic(base_size = 14) +
  theme(axis.text = element_text(color = "black"),
        legend.position = "top")
theme_set(mytheme)
```

Visualization and interpretation challenge

Create three plots, each with appropriately formatted axes and legends. Choose a non-default color palette.

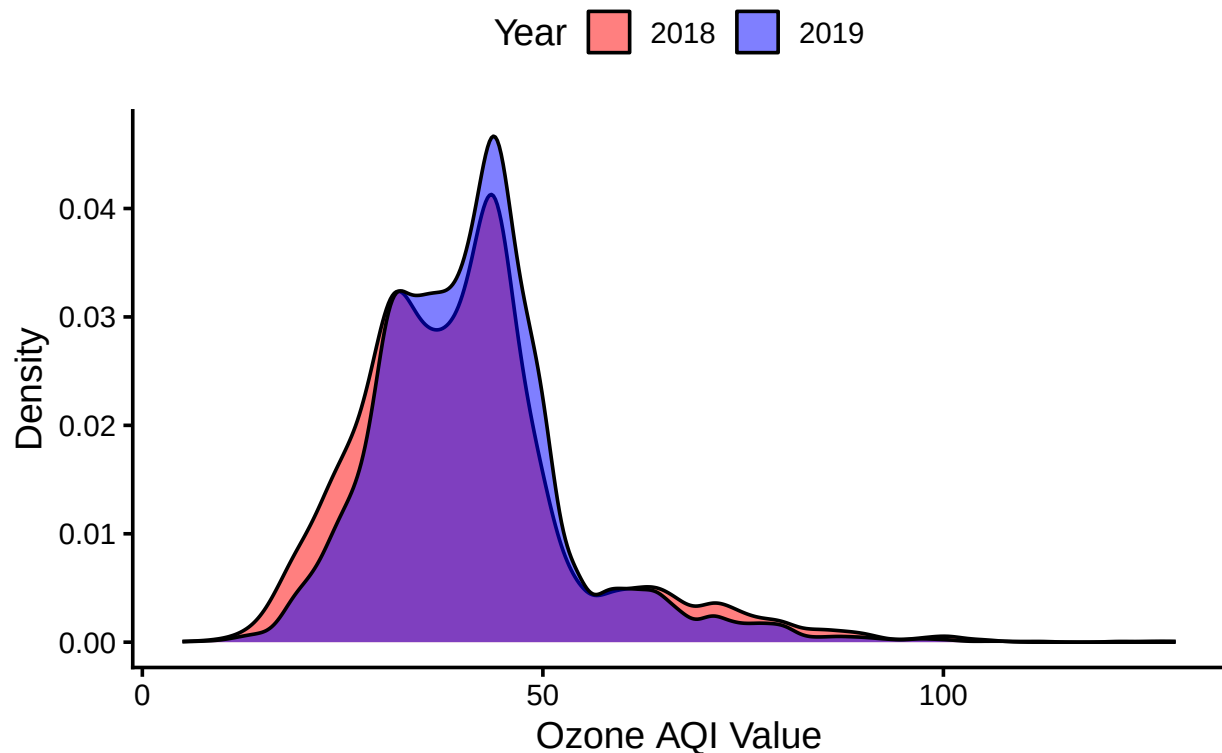

1. `geom_density` of ozone divided by year (distinguish between years by adding transparency to the `geom_density` layer).
2. `geom_boxplot` of ozone divided by year. Add letters representing a significant difference between 2018 and 2019 (hint: `stat_summary`).
3. `geom_violin` of ozone divided by year, with the 0.5 quantile marked as a horizontal line. Add letters representing a significant difference between 2018 and 2019.

#Exercise 1:

```
EPAair %>%  
  ggplot(aes(x=Ozone, fill=factor(Year))) +  
  geom_density(alpha=0.5) +  
  labs(x="Ozone AQI Value", y="Density", title="Density Plot: Ozone by Year") +  
  scale_fill_manual("Year", values=c('red', 'blue'))
```

```
## Warning: Removed 2146 rows containing non-finite outside the scale range  
## ('stat_density()').
```

Density Plot: Ozone by Year

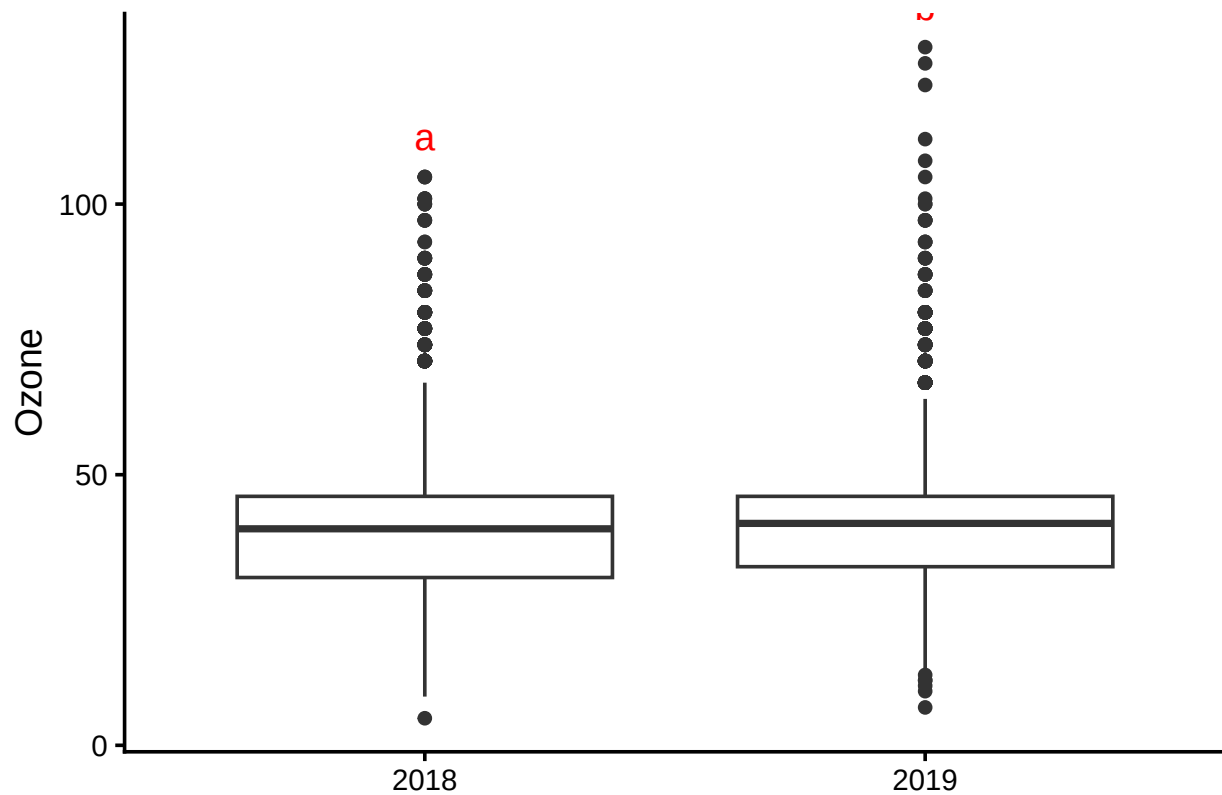

```
EPAair %>%  
  ggplot(aes(y=Ozone, x=factor(Year))) +  
  geom_boxplot() +
```

```
labs(x="") +
stat_summary(
  geom = "text",    #make it a text instead of a point
  fun = max,        #what stat
  label = c("a","b"),
  color='red',
  vjust= -1
)
```

```
## Warning: Removed 2146 rows containing non-finite outside the scale range
## ('stat_boxplot()').
```

```
## Warning: Removed 2146 rows containing non-finite outside the scale range
## ('stat_summary()').
```

EPAair

```

Linear Regression

Important components of the linear regression are the correlation and the R-squared value. The **correlation** is a number between -1 and 1, describing the relationship between the variables. Correlations close to -1 represent strong negative correlations, correlations close to zero represent weak correlations, and correlations close to 1 represent strong positive correlations. The **R-squared value** is the correlation squared, becoming a number between 0 and 1. The R-squared value describes the percent of variance accounted for by the explanatory variables.

For the NTL-LTER dataset, can we predict PM2.5 from Ozone?

#Exercise 2: Run a linear regression PM2.5 by Ozone. Find the p-value and R-squared value.

#Exercise 3: Build a scatterplot. Add a line and standard error for the linear regression. Add the regression equation to the plot.

AIC to select variables

What other variables can we add to improve model?

#Exercise 4: Build correlation plots and identify more possible explanatory variables to add to the regression model.

#Exercise 5: Choose a model by AIC in a Stepwise Algorithm. Do the results from AIC match the variables selected in Exercise 4?

#Exercise 6: Run another regression using the variables selected on Exercise 6. Compare r-squared value to the model from Exercise 2.

Litter Exercise

```
# Wrangle the data
Litter.Totals <- Litter %>%
  group_by(plotID, collectDate, nlcdClass) %>%
  summarise(dryMass = sum(dryMass))

## 'summarise()' has regrouped the output.
## i Summaries were computed grouped by plotID, collectDate, and nlcdClass.
## i Output is grouped by plotID and collectDate.
## i Use 'summarise(.groups = "drop_last")' to silence this message.
## i Use 'summarise(.by = c(plotID, collectDate, nlcdClass))' for per-operation
## grouping ('?dplyr::dplyr_by') instead.

# Format ANOVA as aov
Litter.Totals.anova <- aov(data = Litter.Totals, dryMass ~ plotID)
summary(Litter.Totals.anova)

##              Df Sum Sq Mean Sq F value    Pr(>F)
## plotID         11   7584    689.5    4.813 1.45e-06 ***
## Residuals      198  28363    143.2
## ---
## Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1

# Extract groupings for pairwise relationships
Litter.Totals.groups <- HSD.test(Litter.Totals.anova, "plotID", group = TRUE)
Litter.Totals.groups$groups
